

The first graph is a usual bar chart. Here we can observe a frequency with which customers occur to have any sort of degree. It is evident that the majority has secondary education following by higher and PhD.

In the second graph is a grouped bar chart and it shows the average salary among different educational levels and age groups. The highest salary in the young adults group is attained by those having PhD and secondary education levels. A PhD education level is the most paid for the seniors, while for the middle age adults it is more common to get higher salary with higher education.

The third graph is a stacked bar chart printed for young adults. It can be seen that the biggest portion of money is paid to people with secondary education then followed by higher education and PhD.
